what i have to say about this book is very simple read it please straight through to the end whatever else you were planning to do next nothing could be more important barbara kingsolver author of animal vegetable miracle twenty years ago in the end of nature bill mckibben offered one of the earliest warnings about global warming those warnings went mostly unheeded now he argues we need to acknowledge that we ve waited too long and that massive change is not only unavoidable but already underway our old familiar planet is melting drying acidifying flooding and burning in ways humans have never seen we ve created a new planet still recognisable but fundamentally different in eaarth mckibben surveys the changes already taking place and considers what they will mean for our future adapting to our new home won t be easy it will be expensive and the natural resources on which our economy is built have been damaged and degraded our survival depends mckibben argues on scaling back concentrating on essentials and creating the kinds of communities that will allow us to weather trouble on an unprecedented scale change fundamental change will be our best hope on a planet suddenly and violently out of balance bill mckibben foresaw the end of nature very early on and in this new book he blazes a path to help preserve nature s greatest treasures james e hansen director nasa goddard institute for space studies

as a young norwegian lutheran teenager in rural wisconsin brocker lay awake one night worrying whether

he believed in Jesus enough to get to heaven this getting to heaven anxiety reflected an excessive focus on individual salvation and a loss of concern for the well being of the earth community a faith journey that leaves earth behind is misguided ever since those early teen years Broecker has been on a journey to come home to earth coming home to earth makes the case that there is no salvation apart from earth and that earth care is at the core of our identity and mission as followers of Jesus the ecological consequences of a loss of concern for the well being of earth have been devastating Broecker is especially concerned to determine what will motivate followers of Jesus to make radical changes in our way of life so that we can participate in the healing of wounded earth and all of its inhabitants both human and nonhuman we are far more likely to make needed sacrifices for our fellow creatures if we share God's delight in and affection for them and cherish earth as our home

as hurricanes droughts floods and wildfires are increasing in regularity and intensity climate change can no longer be ignored melting permafrost forest dieback ocean acidification and other processes are creating positive feedback loops which could if not aggressively and quickly addressed spiral out of control and take global warming past the point of no return hothouse earth examines how science politics and social justice must all be part of the equation to counteract climate change

Larry L Rasmussen offers a dramatic new way of thinking about human society ethics and the health of our planet rejecting the modern ethical assumption that morality applies to human society alone earth honoring faith argues that we must derive a system of ethics and morality that accounts for the wellbeing of all creation on earth

In *Abundant Earth* Eileen Crist not only documents the rising tide of biodiversity loss but also lays out the drivers of this wholesale destruction and how we can push past them looking beyond the familiar litany of causes a large and growing human population rising livestock numbers expanding economies and international trade and spreading infrastructures and incursions upon wildlands she asks the key question if we know human expansionism is to blame for this ecological crisis why are we not taking the needed steps to halt our expansionism Crist argues that to do so would require a two pronged approach scaling down calls upon us to lower the global human population while working within a human rights framework to deindustrialize food production and to localize economies and contract global trade pulling back calls upon us to free restore reconnect and rewild vast terrestrial and marine ecosystems however the pervasive worldview of human supremacy the conviction that humans are superior to all other life forms and entitled to use these life forms and their habitats normalizes and promotes humanity's ongoing expansion undermining our ability to enact these linked strategies and preempt the mounting suffering and dislocation of both humans and nonhumans *Abundant Earth* urges us to confront the reality that humanity will not advance by entrenching its domination over the biosphere on the contrary we will stagnate in the identity of nature colonizer and decline into conflict as we vie for natural resources instead we must chart another course choosing to live in fellowship within the vibrant ecologies of our wild and domestic cohorts and enfolding human habitation within the rich expanse of a biodiverse living
